All service work done based on time and materials, without exception. This allows the customer to have the work done properly and effectively, without the repair person attempting to do as little as possible due to a previously provided estimate that doesn't cover all the problems. Since neither customer nor service technician can see underground, any lawn sprinkler system repair estimate is just a guess at best. Time and material is not only a fairer way to deal with an irrigation system repair, it results in the customer getting a better job, while only paying for work actually done.
